PROFESSIONAL SUMMARY

AWS Certified Solutions Architect – Associate with core expertise in AWS cloud architecture, Infrastructure as Code (IaC), and automated deployment pipelines. Proficient in provisioning secure AWS services (VPC, EC2, S3, IAM, CloudFront) using Terraform, orchestrating containerized applications with Docker and Kubernetes, and implementing robust CI/CD workflows via GitHub Actions and Jenkins. Strong foundation in Linux environments and Python/Bash scripting to streamline operations and ensure high system availability. Microsoft Certified Azure Administrator Associate. Eager to start my career as a Cloud/DevOps Engineer, applying strong fundamentals in cloud architecture, automation, and CI/CD to help teams ship reliable, scalable infrastructure.

KEY SKILLS

Cloud Platforms: AWS (VPC, EC2, S3, CloudFront, IAM), Microsoft Azure

IaC & Automation: Terraform, Bash, Shell Scripting

CI/CD & DevOps Tools: Jenkins, GitHub Actions, Git & GitHub, CI/CD Pipelines

Containerization: Docker, Kubernetes

Operating Systems: Linux

EXPERIENCE

Cloud Computing Intern — Tech Mindsparc Innovations Pvt. Ltd.

May 2024 – Aug 2024

- Completed a hands-on Cloud Computing internship, gaining practical exposure to core cloud concepts and applying classroom knowledge to real project scenarios.
- Recognized by the organization for being dedicated, determined, and hardworking throughout the internship period.
- Strengthened foundational cloud skills that directly support ongoing self-driven AWS/DevOps projects and certifications.

PROJECTS

AWS 3-Tier Architecture using Terraform

[\(GitHub Repo\)](#)

- Designed and deployed a highly available 3-tier AWS architecture using Terraform, consisting of an Application Load Balancer, Auto Scaling EC2 application servers, and Amazon RDS across multiple Availability Zones.
- Implemented VPC networking, public/private subnets, NAT Gateway, security groups, CloudWatch monitoring, SNS notifications, and remote Terraform state using Amazon S3.
- Automated Terraform validation and planning using GitHub Actions CI/CD.

Automate AWS Infrastructure Using Terraform & GitHub Actions

[\(GitHub Repo\)](#)

- Automated end-to-end provisioning of AWS infrastructure (VPC, public subnet, Internet Gateway, route table, security groups, and EC2 instance) using Terraform, following Infrastructure as Code (IaC) principles.
- Designed reusable Terraform modules and separate Dev/Production environment configurations, with remote state management for consistent, repeatable deployments.
- Built a CI/CD pipeline with GitHub Actions to automate Terraform plan/apply workflows, using GitHub Secrets to securely manage AWS credentials.

OneTapService — Full-Stack On-Demand Service Booking Platform (Capstone Project)

[\(GitHub Repo\)](#)

- Built a cross-platform service booking application connecting customers with local service providers (plumbing, electrical, cleaning, repairs) using Flutter/Dart for the mobile front end and Node.js for the backend REST APIs.
- Implemented secure user authentication and profile management for both customers and service providers, along with location-based service matching.
- Developed a booking tracker to manage active, completed, and pending service requests, improving transparency for end users.

CERTIFICATIONS

AWS Certified Solutions Architect – Associate

Aug 2026

EDUCATION

Bachelor of Technology — Computer Science & Engineering

Aug 2022 – May 2026

Lovely Professional University, Phagwara, Punjab

Intermediate Education (MPC)

Apr 2020 – Mar 2022

Sri Chaitanya Junior College, Vijayawada, Andhra Pradesh
